

SYSTEM CHECK

**Everyone wants to vibe code.
Nobody wants to vibe support.**

SYSTEM CHECK

**A tool can be easy to build and
still be hard to own.**

The demo is not the operating system.

SYSTEM CHECK

**The first real question is not
who wrote this.**

It is who owns the next issue.

SYSTEM CHECK

Support debt starts where the demo ends.

Wrong input. Permission wall. Missing rule.
Unexpected user. Silent ownership gap.

SYSTEM CHECK

Run the five-question gate.

Who owns issues? Where do issues go? What can the tool touch? What result needs review? What makes us pause or roll back?

SYSTEM CHECK

**Do not write human review
unless you can name the
human role.**

Fog is not an operating model.

SYSTEM CHECK

Agents make this more important.

If an agent can edit, assign, summarize, or move work, it needs a receipt path.

SYSTEM CHECK

**AI made the first version
cheaper.**

It did not make responsibility disappear.

SYSTEM CHECK

Vibe code if it helps.

Just do not forget to vibe support before someone else has to.
